DEVELOPMENT

COMPANY

WHO WE ARE

Since 2005 Redwerk team analyses, designs, implements, and launches software projects for our customers around the world. From native apps to responsive websites, chatbots, and enterprise solutions - we help you create outstanding software that people love to use.

2005	250	70	2
SINCE THE COMPANY WAS CREATED	PROJECTS ACCOMPLISHED	PROFESSIONALS IN TEAM	DEVELOPMENT CENTERS IN UKRAINE

Redwerk started in 2005 as a team of five, creating software with Java. By 2010 we already had 25 high-class professionals on our team, Python and mobile development projects, and opened a second office in the capital of Ukraine - Kyiv. Ever since we've been widening our tech stack and experience in various industries. The projects we developed received honors and awards in different countries.

OUR VALUES

Whether we work on an external project or a tiny inner task, we uphold the same values that have been defined and cultivated in our company since it was founded back in 2005:

Responsiveness

We immediately deal with questions and requests, both from customers and co-workers, for better communication inside and outside the team.

Promptness

Deadlines are important for both our business and business of our customers.

Proactivity

There is no procrastination while we are tasked with something by someone. If there is a sign we'll run out of tasks soon, or there is a lack of input, we let each other know, no idling and wasting.

Written knowledge

We maintain descriptions and logs of all documentation regarding processes and projects in written form to avoid getting stuck when one of our team members is absent.

HOW WE CREATE SOFTWARE

1. DISCOVER

We analyze your project bit by bit to make sure we understand your business well and offer the best solution to reach your goal.

2. DEFINE

After discovering the key functions and goals of your product, we document and estimate each part of it, so you can see how much time and money it will take and what technology and tools it will require.

3. DESIGN

This stage defines the look and feel of your future product. We select color palette and fonts, develop wireframes and a map of your application or service.

4. BUILD

After design is approved, we start developing an MVP or a full scale project - depending on your needs. You can observe every aspect of development process and our managers are always available to assist with your inquiries.

5. TEST

We apply various automatic and manual tests, from unit testing to system and acceptance testing, to make sure your software is smooth and stable upon release.

6. RELEASE

After being analyzed, designed, coded and tested at Redwerk, your product is 100% ready for release! We can help you pick a hosting provider and launch your solution to production, delivering a fully operational software to you.

7. SUPPORT

Some additional support is always helpful. You may choose to sign an SLA with us and get a professional and responsive support team, who will address requests of your clients on a daily basis.

TESTIMONIALS

Redwerk is a strong development organisation. I worked with their developers and PMs at Worldnow and Justin Alexander, Inc. on a variety of projects from video architecture and encoding to basic HTML and can say that both teams were pleased with their work.

Redwerk communicates clearly and they do a nice job at managing expectations, which is important because they are an overseas shop. I will work with them again.

Max Chanoch
Director of IT at Justin Alexander

I've been working with Redwerk almost continuously since 2006 on various complex software development projects (C++, Java, JSP, Spring, Django, iPhone).

This company provides excellent software application development services for a great price. They are very flexible, customer-focused, responsive and communicative. I would warmly recommend other companies to hire them for your software development projects.

Michiel Riedijk
CEO at PageFreezer.com
